## PRE-STORING A PORTION OF A PROGRAM TO ALLOW USER CONTROL OF PLAYBACK ABSTRACT OF THE DISCLOSURE The invention relates to delivering a program to an individual business or residence. In one embodiment, a process for receiving a program by a user location that is sent from a content distributor is described. In one step, a first portion of the program is received and stored at the user location. A user request for the program is detected after storage of the first portion. A second portion of the program is received in response to the detecting the user request. 18 DE 7023757 v1
